Overview

Glass is **100% recyclable** and can be endlessly recycled with no loss of quality

01

130 million tonnes (MT) of glass are currently produced annually. The largest volumes of 63 MT or 48% are accounted for by hollow or container glass.

Global recycling volumes are currently estimated to be around 27 MT, which represents only 21% of the amount of glass produced.

02

03

The highest recycling rates are achieved for container glass, with an estimated 32%, while the recycling rate for flat glass is only 11%

UAE generates approximately 100 million empty bottles per year, but only 10% is recycled in the manufacture of new glass.

04

Glass Recycling

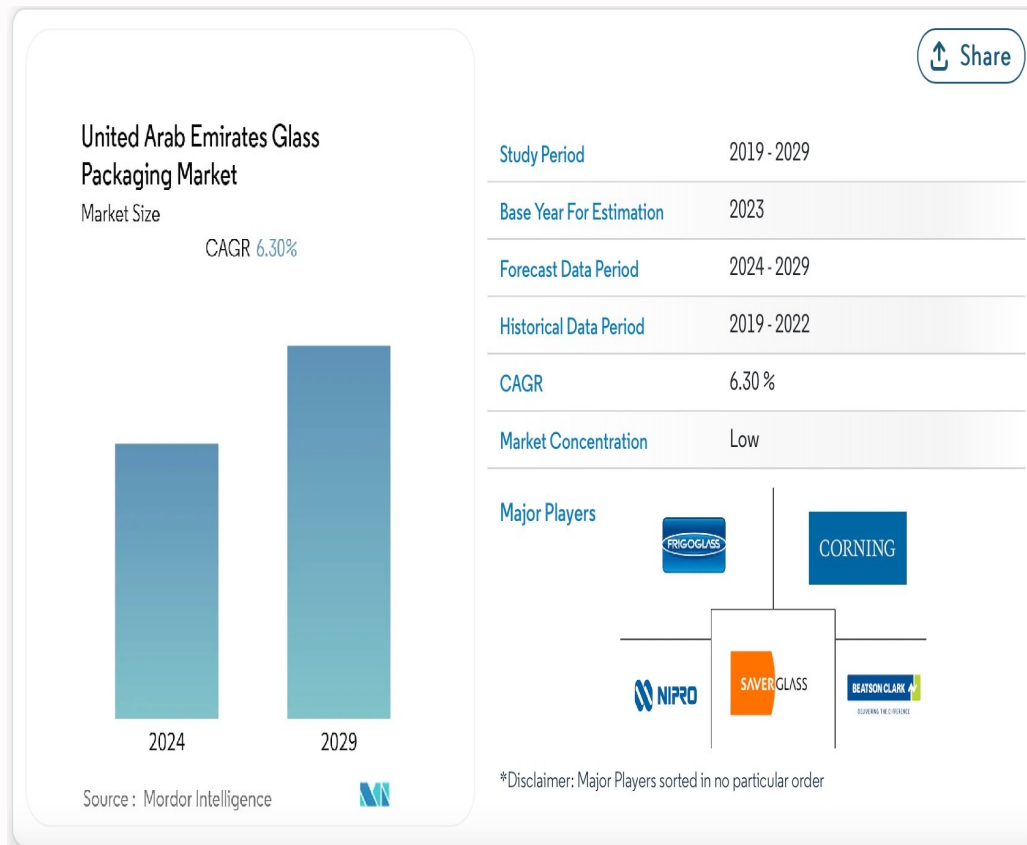

Glass recycling, also known as glass reprocessing, is the process of turning waste glass into new products.

Involves 7 steps

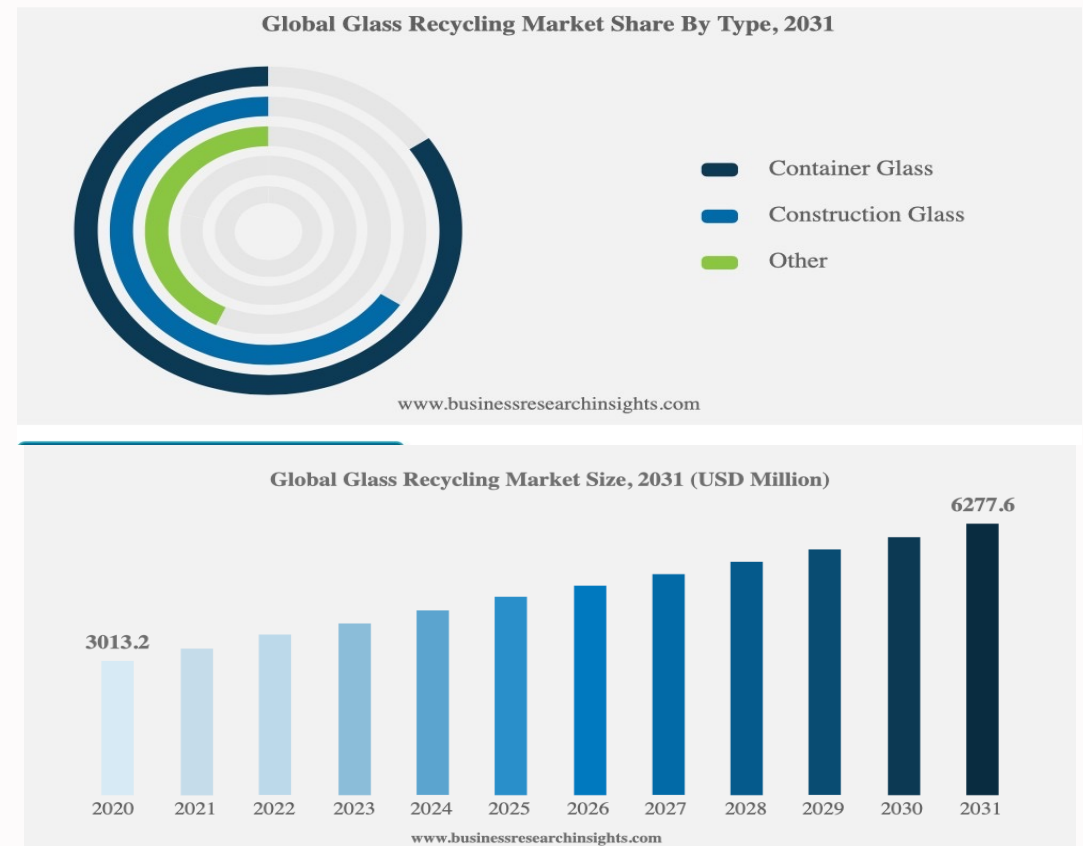

Statistics

The pharmaceutical, food & beverage, and personal care glass packaging markets are expanding significantly in the United Arab Emirate

Global glass recycling market is projected to reach a value of USD 32.7 billion by 2026, growing at a CAGR of 6.2% from 2021 to 2026.

Challenges

The UAE generates approximately 100 million empty bottles per year, of which the director says “about 10 percent is recycled in the manufacture of new glass, and with this trend more than 75 percent will be recoverable within a reasonable period. Changing mindsets is important for recycling efforts to succeed.”

Challenge 01

High Collection and Sorting Costs leads to a Declining Trend in the Market

Challenge 02

costs associated with transportation, sorting facilities, and labour can be a significant barrier, particularly in regions with limited recycling infrastructure.

Challenge 03

Relationship between the quality & obtainability of cullet & the finances of making glass

Challenge 04

Lack of government incentives and the general economic framework

UAE Market Trends

Glass Bottles and Containers Expected to Witness Significant Growth

- The United Arab Emirates imports medicine from 72+ countries
- Two major plans, Dubai Industrial Strategy 2030 and Abu Dhabi Vision 2030 Source: aims to strengthen the domestic high-growth sector.
- The Dubai Executive Council has approved a policy of imposing a 25 fils obligation on disposable plastic bags from July 2022
- In January 2021, the UAE-based perfumer, Salva, revealed a new fragrance Hope dedicated to seafarers..

Personal Care Expected to Witness Significant Growth

- The Messe Frankfurt estimated retail prices for cosmetology products in 2020 to be USD 2.71 billion. Personal care products will lead to a boost in demand for glass packaging across the United Arab Emirates.
- The demand for organic personal care products may also rise due to strict regulations designed to promote the use of organic ingredients in the skincare sector.
- In February 2022, London-based skincare brand Saltee finally landed at GCC.
- Key players are focused on expanding their business by opening new facilities in the country. For instance,

UAE Glass Packaging Industry Overview

- The United Arab Emirates Glass Packaging Market is primarily dominated by few regional and global players who adopt strategies such as product innovation, partnerships, mergers, and acquisitions to increase their market share and further recyclability, driving the market.

Target Customer

Glass

- Container glass manufacturing
- Flat glass manufacturers
- Cement manufacturer

PET

- EEG
- Dubai Municipality
- Tadweer
- Dubai Recycle
- Option to export

Aluminium

- EEG
- Tadweer
- Local recycling buyer
- Option to export

Methodology

Business Model

- Collection of Empty glass bottles.
- Collection of empty aluminium cans.
- Collection of PET bottles.
- Cardboard and crates.
- Can be later extended to other recyclable materials.
- Services to the clients by providing contribution to sustainability and environmental goals.
- Training and implementation of scopes to achieve environmental goals.
- Personalised data on carbon footprints in terms of tonnage of glass collected and recycled. This can be tracked with App. based tracker on cloud.

Revenue Model

- Revenue from the beverages companies against the services provided. Scope of services will include as listed above.
- Revenue by selling the scrap to the potential buyers present in UAE.
- Revenue by charging for the trainings provided on sustainability to the potential customers.

Benefits

Sustainability

- **Endlessly Recyclable** : Glass can be recycled infinitely without loss of quality or purity
- **Conserves Natural Resources**: Reduces the need to extract raw materials like sand and limestone.

Energy Savings

- **Lower Energy Consumption**: Recycling glass uses about 40% less energy than producing new glass from raw materials.

Environmental Benefits

- **Reduces Landfill Waste**: Diverts waste from landfills, reducing pollution and saving space.
- **Lower CO2 Emissions**: Produces significantly less CO2 compared to manufacturing new glass.

Economic Advantage

- **Job Creation**: Supports jobs in the recycling and manufacturing industries.
- **Cost-Effective**: Using recycled glass in production reduces manufacturing costs for glassmakers.

Future goals

01

Leave no bottle behind. This multiprong initiative involves new or expanded bottle-bill laws, clean collection options, and expanded commercial recycling programs.

02

Transform the recycling system. Investments and improvements must be made in collection, separating, and processing, especially in selected regions, to reduce the glass that is carted to landfills.

03

Drive collective action. This entails creating user-friendly deposit-return programs run by the private sector and other cooperative approaches that build awareness and momentum
